BM&M

Chip Classifier

BM&M's Chip Classifier provides valuable quality and maintenance feedback for any chip producer. The Classifier's gyratory action is exactly like our full size Chip Screens. This allows you to use the Classifier to predict chip quality and thus avoid problems with your chip buyers. Additionally the Classifier can be used to optimize your chipper knife sharpening schedule and your screener hole sizes for minimum fibre loss. The BM&M Classifier is an affordable, lightweight, and portable unit that comes complete with everything you need including the exact screen size, or thickness trays for your application.

DIMENSIONS

TRAY SIZES AVAILABLE

Round Hole Trays
