

MINI SUPER SCREEN

Seed*Scalping, Sizing and Sifting Technology*

CASE HISTORY

*Allied Seed, LLC
Worland, WY
USA*

Background

This seed facility located in northeast Wyoming operate their seed coating line with their BM&M Super Screen as the last step in their Quality Control process. They process alfalfa, Bermuda and other seed having large or minimal coating applications.

Challenge

To ensure that fines and oversize material such as “doubles” do not make it into any bag of Allied Seed, while at the same time being gentle on the seed coating.

Solution

Together with BM&M's engineers, Allied Seed selected BM&M's Mini Super Screen (2-Deck configuration) for their needs.

The Mini Super Screen has now been operating for nine years, 5 to 6 months per year, 10 hours per day, with virtually no maintenance required, insuring only the best quality product for their customers.

*9 Years Running and Virtually No
Maintenance Required!*
