Rotary Star Chip Feeder

For the Control of Surges, Feed Rate and Distribution

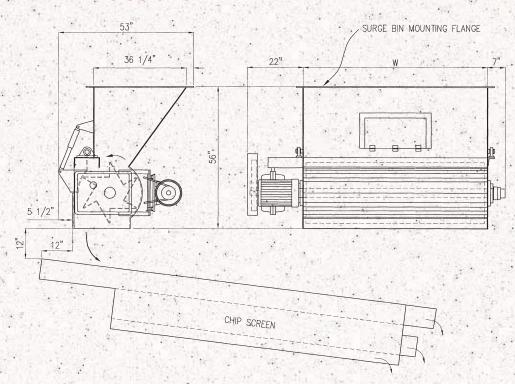

- Positive displacement 6-pocket rotor, evenly distributes load onto screen infeed chute.
- Two-row spherical bearings provide long trouble free life.
- Relief-gate controlled by adjustable pneumatic cylinders allows oversize chunks or debris to pass through.
- Standard drive components such as a shaft mount helical reducer,1800 RPM motor, v-belt drive and fully enclosed guard, make the feeder easy to service.
- Optional variable speed control gives infinite feed-rate control.

Rotary Star Chip Feeder

BM&M's Rotary Star Feeder is a surge bin mounted device which evenly supplies chips to a chip screen. The Feeder is bolted to the bottom of a suitably sized surge bin by means of a flanged connection. A surge bin and feeder can reduce the size of your chip screen by reducing the surge capacity requirements of the screen, and by increasing the chip screen's efficiency through even distribution. Standard practice is to use a feeder that is 1 to 2 feet narrower than the chip screen.

Dimensions

HP	CAPACITY RANGE, UNIT/HR.		WEIGHT	WIDTH
	30 RPM	10 RP	Lbs.	W
5	60	20	2630	4'
5	75	25	2900	5'
5	90	30	3250	6'
7.5	105	35	3800	7'
7.5	120	40	4200	8
10	135	45	4500	9'
10	. 150	50	4800	10'
10	165	55	5300	11'

1 UNIT=200 Ft2

Specifications

The BM&M Chip Feeder uses a star rotor design with:

24" - 6 pocket star design

3/8" mild steel construction

3-7/16" cold rolled steel shaft

Double roller bearing design

The Feeder housing features:

3/8" mild steel material

Self cleaning, full width relief gate with pneumatic control

12" x 24" access and clean out door

Flanged mounting detail for mounting to the bottom of the bin.

The Drive assembly features

A helical gear shaft mounted reducer

Drive motor, 1800 RPM, TEFC specs.

V-Belt drive assembly

Drive safety quard
